

## IDC4251C Module 1 Project

This is the project for Module 1. There is no Canvas assignment, all submissions will be made to your GitHub Classroom repository after accepting the invitation.

This project is described in Ch. 1 of the Microsoft Power BI video course. The data file "gdp-countries.xlsx" can be found in the repository after you accept the invitation.

Complete the tasks through "Creating our First Visuals". Instead of overwriting the stacked column chart, add a report page (click on the + tab at the bottom) and create the map chart on this new page.

Take separate screen snips of **both** charts and submit them to your repository. You can do this either by adding/committing/pushing the files after cloning the repo or by uploading them to the repo and then committing them directly in GitHub).
